DEPARTMENT OF COMPUTER SCIENCE AND TECHNOLOGY

B.Tech Final Year Capstone Project Phase I-Weekly Progress Report

Project Semester: 7

Aug-Dec 2026

Week No: 1

Date : From : 03/08/2026 To 07/08/2026

Department	Computer Science and Technology
Team Number	Team 3
Names & USN of Team Members	Putta Sujith & ENG23CT0058 K Vikas Aneesh Reddy & ENG23CT0052 Karnati Mokshith & ENG23CT0053
Name of the Guide	Dr. Ramandeep Kaur
Project Title	IntentCloud - Intent-Aware Cognitive Cloud Memory System

Work Carried out by the team during the Week (in Bullet points only):

- Completed and presented the Review-0 covering the problem statement, existing-system analysis, objectives, and literature survey.
- Set up the Next.js, TypeScript, and Tailwind CSS frontend development environment.
- Set up the FastAPI backend and verified the /health endpoint with CORS configuration.
- Installed and tested Ollama with Phi-3 Mini for local intent understanding.
- Set up Qdrant locally and performed an initial vector insertion and similarity-search test.
- Verified communication between the Next.js frontend and FastAPI backend on the local system.

Individual Contribution from the Student:

Putta Sujith	• Set up the FastAPI backend with the /health endpoint and CORS. • Tested Ollama and Phi-3 Mini locally. • Verified local model execution and hardware backend detection. • Contributed to the Review-0 technical preparation. • Assisted in validating the initial backend environment.
K Vikas Aneesh Reddy	• Installed and configured the Qdrant client. • Created a local Qdrant collection for initial testing. • Inserted dummy vectors and performed a similarity query.

B.Tech Final Year Capstone Project Phase I-Weekly Progress Report

Project Semester: 7

Aug-Dec 2026

Week No: 2

Date : From : 10/08/2026 To 14/08/2026

Department	Computer Science and Technology
Team Number	Team 3
Names & USN of Team Members	Putta Sujith & ENG23CT0058 K Vikas Aneesh Reddy & ENG23CT0052 Karnati Mokshith & ENG23CT0053
Name of the Guide	Dr. Ramandeep Kaur
Project Title	IntentCloud Intent-Aware Cognitive Cloud Memory System

Work Carried out by the team during the Week (in Bullet points only):

- Refined the project objectives and overall methodology based on the Review-0 recommendations and revalidated the approach with the findings from the 19-paper literature survey.
- Finalized the literature survey, research gaps, and motivation for the proposed IntentCloud system.
- Started building the Next.js file-upload page to accept PDF, DOCX, and TXT documents.
- Developed the FastAPI /upload endpoint to receive and store uploaded files.
- Implemented the initial text extraction process using PyMuPDF for PDF files and python-docx for DOCX files.
- Tested the upload and extraction process using sample documents and checked whether the extracted text was being generated correctly.

Individual Contribution from the Student:

Putta Sujith	• Worked on the PDF and DOCX text extraction functions using PyMuPDF and python-docx. • Tested the extraction process with sample files and checked the extracted text.
--------------	---

	- Helped refine the project methodology based on the literature findings. - Contributed to finalizing the research-gap and motivation sections.
K Vikas Aneesh Reddy	- Worked on the FastAPI /upload endpoint for handling uploaded files. - Set up the basic file-storage structure for the uploaded documents. - Helped refine the project objectives and methodology based on the Review-0 feedback and revalidated them with the findings from the 19-paper literature survey. - Tested file uploads through the backend and checked whether the files were stored correctly.
Karnati Mokshith	- Worked on the Next.js upload page for accepting PDF, DOCX, and TXT files. - Connected the upload page with the FastAPI backend and checked that the files were being sent correctly. - Tested the frontend upload flow and verified that the backend response was received properly.

Work Planned for the Following Week:

- Generate document embeddings using sentence-transformers and the all-MiniLM-L6-v2 model.
- Create the Qdrant collection with document vectors and required metadata.
- Connect the upload process from text extraction, embedding generation, Qdrant storage.
- Develop the Next.js dashboard to display file count and topic information.
- Add the GET /stats endpoint to provide dashboard data.
- Finalize the Review-1 architecture and workflow diagrams and prepare the initial slide outline.

Percentage Work Completed: 18%

B.Tech Final Year Capstone Project Phase I-Weekly Progress Report

Project Semester: 7

Aug-Dec 2026

Week No: 3

Date : From : 15/08/2026 To 21/08/2026

Department	Computer Science and Technology
Team Number	Team 3
Names & USN of Team Members	Putta Sujith & ENG23CT0058 K Vikas Aneesh Reddy & ENG23CT0052 Karnati Mokshith & ENG23CT0053
Name of the Guide	Dr. Ramandeep Kaur
Project Title	IntentCloud - Intent-Aware Cognitive Cloud Memory System

Work Carried out by the team during the Week (in Bullet points only):

- Generated document embeddings using sentence-transformers with the all-MiniLM-L6-v2 model.
- Created a local Qdrant collection with document vectors and metadata such as filename, topic tags, and upload time.
- Connected the upload process from text extraction, embedding generation, Qdrant storage.
- Started developing the Next.js dashboard to display the file count and topic tags.
- Added the GET /stats endpoint to provide the required dashboard data.
- Worked on the architecture and workflow diagrams and slide preparation for the upcoming Review-1.

Individual Contribution from the Student:

Putta Sujith	● Worked on generating document embeddings using the all-MiniLM-L6-v2 model. ● Connected the embedding generation process with the upload pipeline. ● Worked on the module-design content for the upcoming Review-1, focusing on the cognitive-layer components. ● Helped create the architecture and workflow diagrams and prepare the slides
--------------	--

	for the upcoming Review-1.
K Vikas Aneesh Reddy	- Created the local Qdrant collection with the required vector and metadata structure. - Worked on storing document embeddings in Qdrant whenever a file was uploaded. - Tested a similarity query to check whether the correct file could be retrieved.
Karnati Mokshith	- Worked on the Next.js dashboard to show the file count and topic tags. - Connected the dashboard to the GET /stats endpoint and checked that the required data was coming through properly.

Work Planned for the Following Week:

- Prepare for and deliver the upcoming Review-1 presentation covering architecture, module design, workflow diagrams, database/index design, technology stack, and task allocation.
- Implement the POST /search endpoint using Phi-3 Mini to process natural-language queries.
- Develop the Next.js /search page to display the initial search results.
- Add the Tesseract OCR fallback for scanned PDF documents.
- Implement duplicate detection during file upload.
- Perform regression testing of the upload, extract, embed, store pipeline.

Percentage Work Completed: 30%
